Project Design Phase-I
Solution Architecture
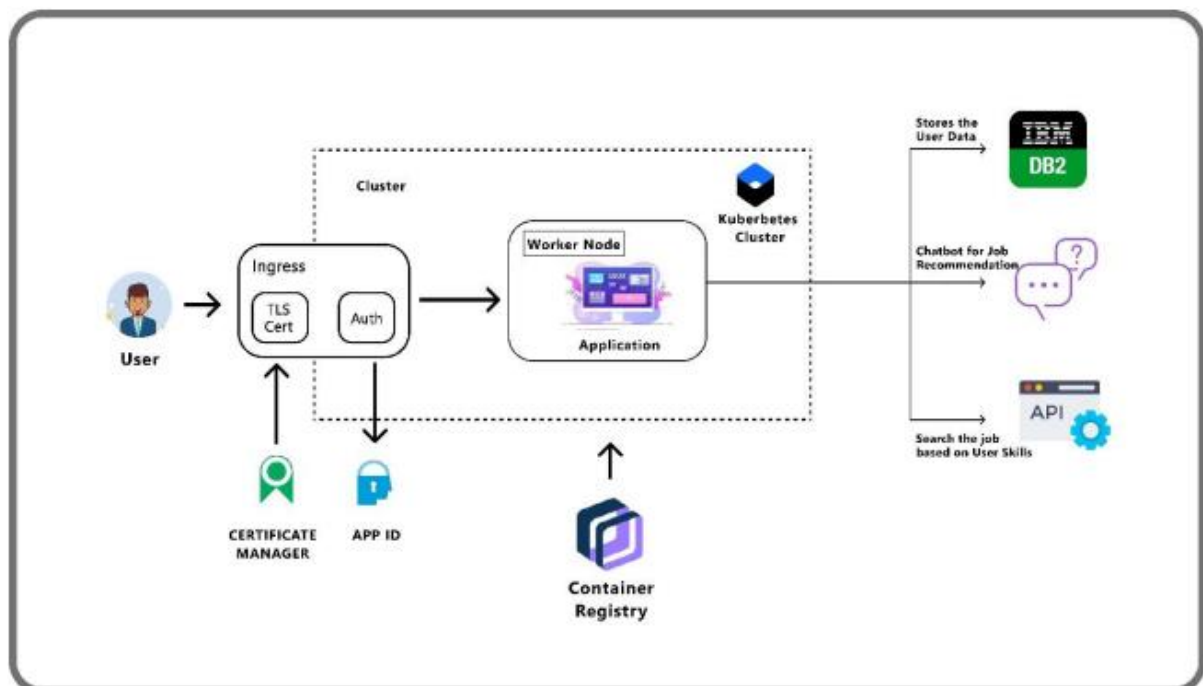

Date	16 October 2022
Team ID	PNT2022TMID16536
Project Name	Skill/Job Recommender Application
Maximum Marks	

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- A Job recommender can be used by Hybrid filtering technique

- Jobs must be recommended based on the skills and experience of the candidate. Using hybrid filtering that combines collaborative and content – based filtering

- Ads for a company that pays internet bills applications and specific income to achieve a certain number of registrations.

- The job recommendation engine makes the conversion,the candidate submits a confirmation,and the company or job is moved up in the view list or priority list.
